A Visual Feast: Stunning Botanical Illustrations

The heart of The Illustrated Herbarium of Medicinal Plants lies in its breathtaking botanical illustrations. Each plant is captured in intricate detail, showcasing its unique beauty and medicinal attributes. From the delicate

petals of lavender to the towering stalks of aloe vera, these illustrations bring the plant kingdom to life.

Comprehensive Plant Profiles: Healing Properties and Uses

Beyond the aesthetics, The Illustrated Herbarium of Medicinal Plants provides in-depth profiles of each plant, covering its traditional and modern medicinal uses, chemical constituents, and potential side effects. You'll

learn how to identify, cultivate, and prepare medicinal plants, empowering you to harness their healing power.

Historical and Cultural Insights: The Plants That Shaped Societies

The Illustrated Herbarium of Medicinal Plants is not merely a scientific guide; it's also a journey through the rich history and diverse cultures that have used plants for healing. From ancient herbalists to modern-day practitioners, plants have played a vital role in shaping human health and well-being.

Significance of medicinal plants in human life

Akhileshwar Kumar Srivastava

1.1 HISTORICAL IMPORTANCE OF MEDICINAL PLANTS IN HUMAN SOCIETY

Adam and Eve lived in heaven and they were familiar neither about the disease nor suffering; once they were expelled then they discovered misery and disease.

Ever since the ancient times, in search for rescue of their disease, people looked for drugs in nature. The beginning of the medicinal plants' use was instinctive as it is the case similar in animals (Mogeniuk, 2004). In fact, in those times there were no sufficient information either concerning the reasons for the illnesses or concerning which plant and how it could be utilized as a preventive remedy—everything was based on experience. In time, the usage of specific medicinal plants for treatment of specific diseases was discovered; thus, the medicinal plants' usage gradually increased the empirical framework and became explanatory facts. The plants had been the source of treatment and prophylaxis until the advent of biochemistry in the 16th century (Kelly, 2000).

Necessity is the mother of invention, therefore, since ancient times man has searched for remedies to combat against several diseases. Historically, man has explored the nature for two major needs: food for survival and herbs for relieving of pain and diseases. The ancient civilizations used herbs or mixtures of them named as *corpus therapeuticum* as a complete intensive treatment of diseases. One of these components goes as *papyrus*. The medicinal herbs that were used in Egyptian culture were explained in the *E. papyrus* in about 1550 bc. German Egyptologist Dr. George Ebers purchased the papyrus in Thebes in 1862 and explored its components and described it as an extraordinary value. Indian Ayurveda ("science and knowledge of life") was discovered and has been implicated in India since thousands of years back, 900 bc (Eiblck, 1977).

Expert Insights: Essays from Leading Herbalists

To complement the comprehensive plant profiles, The Illustrated Herbarium of Medicinal Plants features insightful essays from renowned herbalists. These experts share their knowledge and experience, offering practical guidance and valuable insights into the world of medicinal plants.

MAHOMET ALLUM: AUSTRALIA'S LEADING HERBALIST-BENEFACITOR?Dr Daniel Abdur-Rahman Batchelor¹

Abstract: Mahomet Allum: an Afghan herbalist whose family practised medicine over centuries arrived in 1891 and spent most of his life in Australia, eventually settling in Adelaide. He endeared himself especially to the poor and labour class, treating their illnesses efficaciously without payment. He donated generously to charities and disseminated Islamic knowledge. He was demonstrably one of Australia's greatest herbalist-benefactors.

Allum criticised contemporary Australian medical practices – he pioneered campaigning in Australia against the inhumane use of live animals for vivisection and pathological testing, and injecting animal serums into humans. He stood up for principles in the ensuing challenge between tradition and modernity, which ended in court with him being convicted for claiming to be a "physician," which witnesses denied. The accounts reviewed suggest Mahomet Allum's herbalist skill was likely superior to many Western medical outcomes in the 1930s, implying that the healing capabilities of traditional Afghan and Islamic medicine were only equalled in the past century. Allum was a pioneer in challenging the prevailing view of European racial superiority. His reported shortcomings were that he lost an opportunity to promote himself and his often extreme criticisms of "Western" medicine, including vaccinations. Sadly, his wife died from smallpox, for which effective vaccination had been discovered and used in Ottoman Turkey before 1700.

Keywords: *Adelaide, Afghan, Australian, herbalist, Muslim, Mahomet Allum*

INTRODUCTION

Findings for this biographical study are based on primary and secondary sources, especially historical newspaper articles. There was some difficulty in finding primary source materials. Allum reportedly could not read or write, although he published articles about healing and Islam. His wife and friends helped him with these, which presumably reflected Allum's poverty. Sadly, his wife died from smallpox, for which effective vaccination had been discovered and used in Ottoman Turkey before 1700.

¹ Allum fellow at the International Institute of Advanced Islamic Studies, Malaysia, Kuala Lumpur; and regional editor (Australia) for the *Islam and Civilizational Review Journal* and columnist with the *Australian Muslim Times*.

A Treasury of Knowledge for Herbalists and Plant Lovers

With its stunning imagery, detailed plant descriptions, and captivating essays, *The Illustrated Herbarium of Medicinal Plants* is an indispensable resource for:

- Herbalists who seek to expand their knowledge and deepen their practice
- Gardeners who wish to cultivate medicinal plants in their own gardens
- Nature enthusiasts who are fascinated by the medicinal wonders of the plant kingdom
- Health professionals who want to incorporate herbal remedies into their practice
- Anyone who appreciates the beauty, diversity, and healing power of nature
