- Fatigue

- Brain fog
- Headaches
- Muscle cramps
- Weight gain
- Skin problems
- Digestive issues
- Sleep problems
- Mood swings

The good news is that modern deficiency illness is a treatable condition. By taking the right supplements and making some simple lifestyle changes, you can restore your health and reclaim your life.

## **How to Test for Modern Deficiency Illness**

The first step to treating modern deficiency illness is to get tested. Intracellular micronutrient testing is a simple and accurate way to measure the levels of essential nutrients in your body. This test can be done through a blood draw or a urine sample.

Once you have your test results, you can work with a healthcare practitioner to develop a personalized treatment plan. This plan may include taking supplements, making dietary changes, and/or implementing lifestyle changes.

## **The Benefits of Intracellular Micronutrient Testing**

Intracellular micronutrient testing offers a number of benefits, including:

- **Accuracy:** Intracellular micronutrient testing is a more accurate way to measure nutrient levels than traditional blood tests, which only measure the levels of nutrients in your blood serum.
- **Comprehensiveness:** Intracellular micronutrient testing measures a wide range of essential nutrients, including vitamins, minerals, amino acids, and fatty acids.
- **Personalization:** Intracellular micronutrient testing results can be used to create a personalized treatment plan that is tailored to your individual needs.

## Unlock the Secrets of Modern Deficiency Illness

If you are suffering from unexplained symptoms, you may be suffering from a modern deficiency illness. Intracellular micronutrient testing is a simple and accurate way to test for this condition. By taking the right supplements and making some simple lifestyle changes, you can restore your health and reclaim your life.
